

Shieldex Forensic Solutions

In forensics, every little detail counts. Founded in 1978, Shieldex is a premium manufacturer of shielding textiles that produces durable solutions for forensic applications from its own products. All forensic products are measured according to the recognised IEEE 299/2006 standard and offer excellent and reliable shielding of up to 85 dB in the frequency range from 0.03 to 16 GHz.

Shieldex® Shielding Pouches

Shieldex® Shielding Pouches are available in different sizes for mobile phones, laptops and tablets. The bags block all mobile signals to prevent hacking, tracking and spying. When a device is enclosed in the Shieldex® Shielding Pouch, no functions or data can be remotely triggered or deleted, and no communication can penetrate. Individual sizes and branding are possible.

Shieldex® Forensic Box

The Shieldex® Forensic Box is a mobile, lightweight, and flexible solution for immediate use at the crime scene. Lightweight and space-saving, it offers the possibility to view confiscated devices directly at the scene in an isolated room. The view into the box is made possible by a viewing window. Users can easily operate the confiscated devices through the gloves with a touch screen pen.

Sizes (LxWxH)

Ante-Chamber

1200 x 800 x
2180 mm

Main Chamber

2500 x 2000 x
2180 mm

Shieldex® Forensic Enclosure

Shieldex® Forensic Enclosures have a shielding performance of up to 85 dB in the frequency range from 0.03 to 16 GHz. The tent is designed as a storage or workstation for analysing confiscated equipment. The insulated ante-chamber allows the user shielded access to the main chamber. The size and equipment of the tent can be adapted to your individual needs.
